Abstract

When commenting on rebounds, it considers to be one of the most important data in basketball games. Team tends to control the rebound in order to win the game. However, many coaches have questioned the role that offensive rebounds played in a game. They think that team should give up some offensive rebounds so that team tends to get to the defense transition quickly. In this paper I analyze the effect of offensive rebound on NBA team wins.

Key words: offensive rebound, win loss percentage, NBA
